SKILLS

Python, Django

PHP, Laravel

Flutter

React

Docker, Kubernetes

Git

PROFILE

I am a junior full stack developer that loves to build web and mobile applications. My work relies on writing clean and efficient code, being in a constantly self-evolving state of mind, and always trying to get the best out of me. I accumulated 1+ years of experience in Django, Laravel, Flutter, and React by creating or maintaining applications for the last company I worked at and by creating two personal projects of which I am very proud.

EXPERIENCE

Junior Full Stack Developer at Start Small Solutions
October 2021 — Present

I started to be a part of this company after I graduated from college, where I had the opportunity to work with a really experienced team. Here's some work that I have done:

- Created and maintained the UI of a mobile application using Flutter and some Java, which reduced the time spent on accounting work for an auto service company.
- Created and maintained a web application / microservice, using Django, for a client that sells personalized storybooks for children, which helped them to easily add new books to their main website.
- Maintained and developed new features for a website owned by a flag seller company.
- Did front-end tasks, using HTML, Bootstrap/Tailwind, and JS, in collaboration with a company that implements the "Career" page for different websites.

Personal projects

Using the skills accumulated through the years I developed some applications that I want to share with you:

- Mobile application that keeps track of the aliments in your house and based on those it displays different cooking recipes. It aims to reduce the amount of money people spend on ordering food. (GitHub)
- Web application that uses the webcam and a machine learning model to detect if a person is wearing a medical mask. Its purpose is to prevent people from entering a store without a mask in a pandemic situation. (GitHub)

Intern at Freshbyte
July 2019 — August 2019

Being part of this internship I accumulate my first-time experience working with a team on a real project.

- We developed an application that keeps track of employee's activity in a company.

EDUCATION

Automation and Computer Science, Technical University of Cluj-Napoca
July 2016 — July 2020
